Summary

As a passionate backend developer with expertise in Laravel and PHP, I have also worked with Node.js and Python. While my primary focus is on backend development, I have some experience with frontend technologies such as JavaScript, React.js, and Vue.js. In addition, I have experience in the DevOps field with Docker, and I am always eager to learn new technologies to improve my career and productivity. With a collaborative approach to teamwork and a focus on delivering quality work within project timelines, I am excited to take on new challenges and explore innovative solutions.
